EDUCATION

De La Salle University

BS Computer Engineering

2009-2014

Swift | SwiftUI | MVVM / Clean | Combine | REST & Websocket | DI

EXPERIENCE

Senior iOS Developer

Nov 2022 – Feb 2026

Bitazza

Bangkok, Thailand

Worked in one of Thailand's biggest FinTech cryptocurrency platforms with users across the globe.

- Maintained, developed and documented version 2 of Bitazza (Swift | SwiftUI | MVVM | Clean | Combine | Swinject DI)
- Developed and influenced foundational changes for version 2
- Maintained and developed features of version 1 of Bitazza (Objective C | Swift | UIKit | MVC)
- Led development of Futures Trading system and Contract for Difference trading including trade execution pipelines, WebSocket-driven real-time market data and an optimized data presentation.
- Acted as technical bridge between frontend, backend and mobile teams to align API and logic between platforms
- Worked with cross-regional teams

Senior iOS Developer

Nov 2020 – Nov 2022

Sakay.ph

Manila, Philippines

- Maintained and developed Sakay.ph app (Swift | UIKit | MVC-State)
- Implemented Jeepney (Philippines' public transport vehicle) tracking (Google Maps SDK)
- Implemented Bus tracking system with ticket payment options (Internal payment)
- Introduced optimizations on handling rendering in google maps
- Started iOS documentations
- Sole iOS developer
- Mentored cross-platform team on mobile architecture and performance best practices
- Introduced Lottie and created animations from Design team's resource

Mobile Developer

Sep 2018 – Aug 2020

Zennya

Makati, Philippines

- Maintained and developed Zennya (Objective C | UIKit / Programmatic | MVC)
- Implemented Scheduled booking, a drag and drop style calendar and timeline where users drop the appointment into the timeslots.
- Implemented On-demand online health and medical consultations (Twilio)
- Transitioned the app from Wellness-focused app to Health and Medical services platform, contributing to business continuity during the pandemic
- Sole iOS developer
- Worked with foreign colleagues

Software Engineer I

Apr 2015 – Feb 2018

eScience

Mandaluyong, Philippines

- Maintained and developed SFE | SFE-PM app (Objective C | UIKit / Programmatic | MVC)
- Maintained and developed company's backend (Java Spring)
- Created a file management library for use on multiple company's apps with ready made UI for accessing and downloading internal files from internal server
- Improved tracking of specifications for backend
- Created, reworked and improved icons for both iOS and Android in SVG format (Photoshop | Illustrator).

Intern Software Developer

Mar 2014 – Jul 2014

EMS Components Assembly Inc.

Laguna, Philippines

- System case study on improvements on the time keeping system in the company

De La Salle University

Thesis

- Dynamic Memory Swapping in Android - management of disk caching behavior depending on user app activity.

SIDE PROJECTS

JFlightShaker

- A C# based windows app that generates controller input based bass shaker effects via audio signals for arcade flight sim games with no telemetry

JGraph

- A Swift | UIKit based demo of a reusable and scalable bar graph with animations with no external library used.

Discord Game Server Bot

- A Javascript + Node.js based discord bot that uses DiscordAPI and SteamAPI that can be reused to control and setup any game server for friends to use. Also comes with a modular and standardized UI logger that will be familiar to players even if on a completely different game.
